quest:

Break the Doomstones!

In a world battered and desolate from centuries of human greed, humanity teeters on the edge of destruction. Amid this tumultuous time, Jun Quan, driven by the darkest thoughts and desires, sought to harness the latent power dwelling within the human psyche. Using ancient and forbidden rituals, he channelled the malevolent energy into four crystalline structures, which would later become the infamous Doomstones - Industrialem, Super-Consumat, Exesa, and Pollutio. However, when the last stone was cast, 1 of the stones was hidden away by Chi Mai. Now, Jun Quan has gathered all of the Doomstones.

Humanity's last beacon of hope lies in awakening the Forgotten Powers to break each individual doomstone.

Instructions:

1. Find out what is the task each riddle points you to.
2. Confirm your guess with a facilitator before starting on the task!
3. Find the riddler for a mystery prize?? (Legend has that riddler has quite a charming scar on his left eye, along with a love for alchemy).

Riddles:

1. Super-consumat (Overconsumption)

The key to this problem manifests as a series of elusive equations. However, remember that the resolution of this problem emerges not as a numerical solution, but rather as a revelation. Grapple with forces that threaten to topple the delicate balance!

2. Exesa (Erosion)

As the Earth's features succumb to the unyielding touch of time, a puzzle emerges. The seeker shall draw forth the resilience of geometry and precision and construct a multi-sided figure.

3. Pollutio (Pollution)

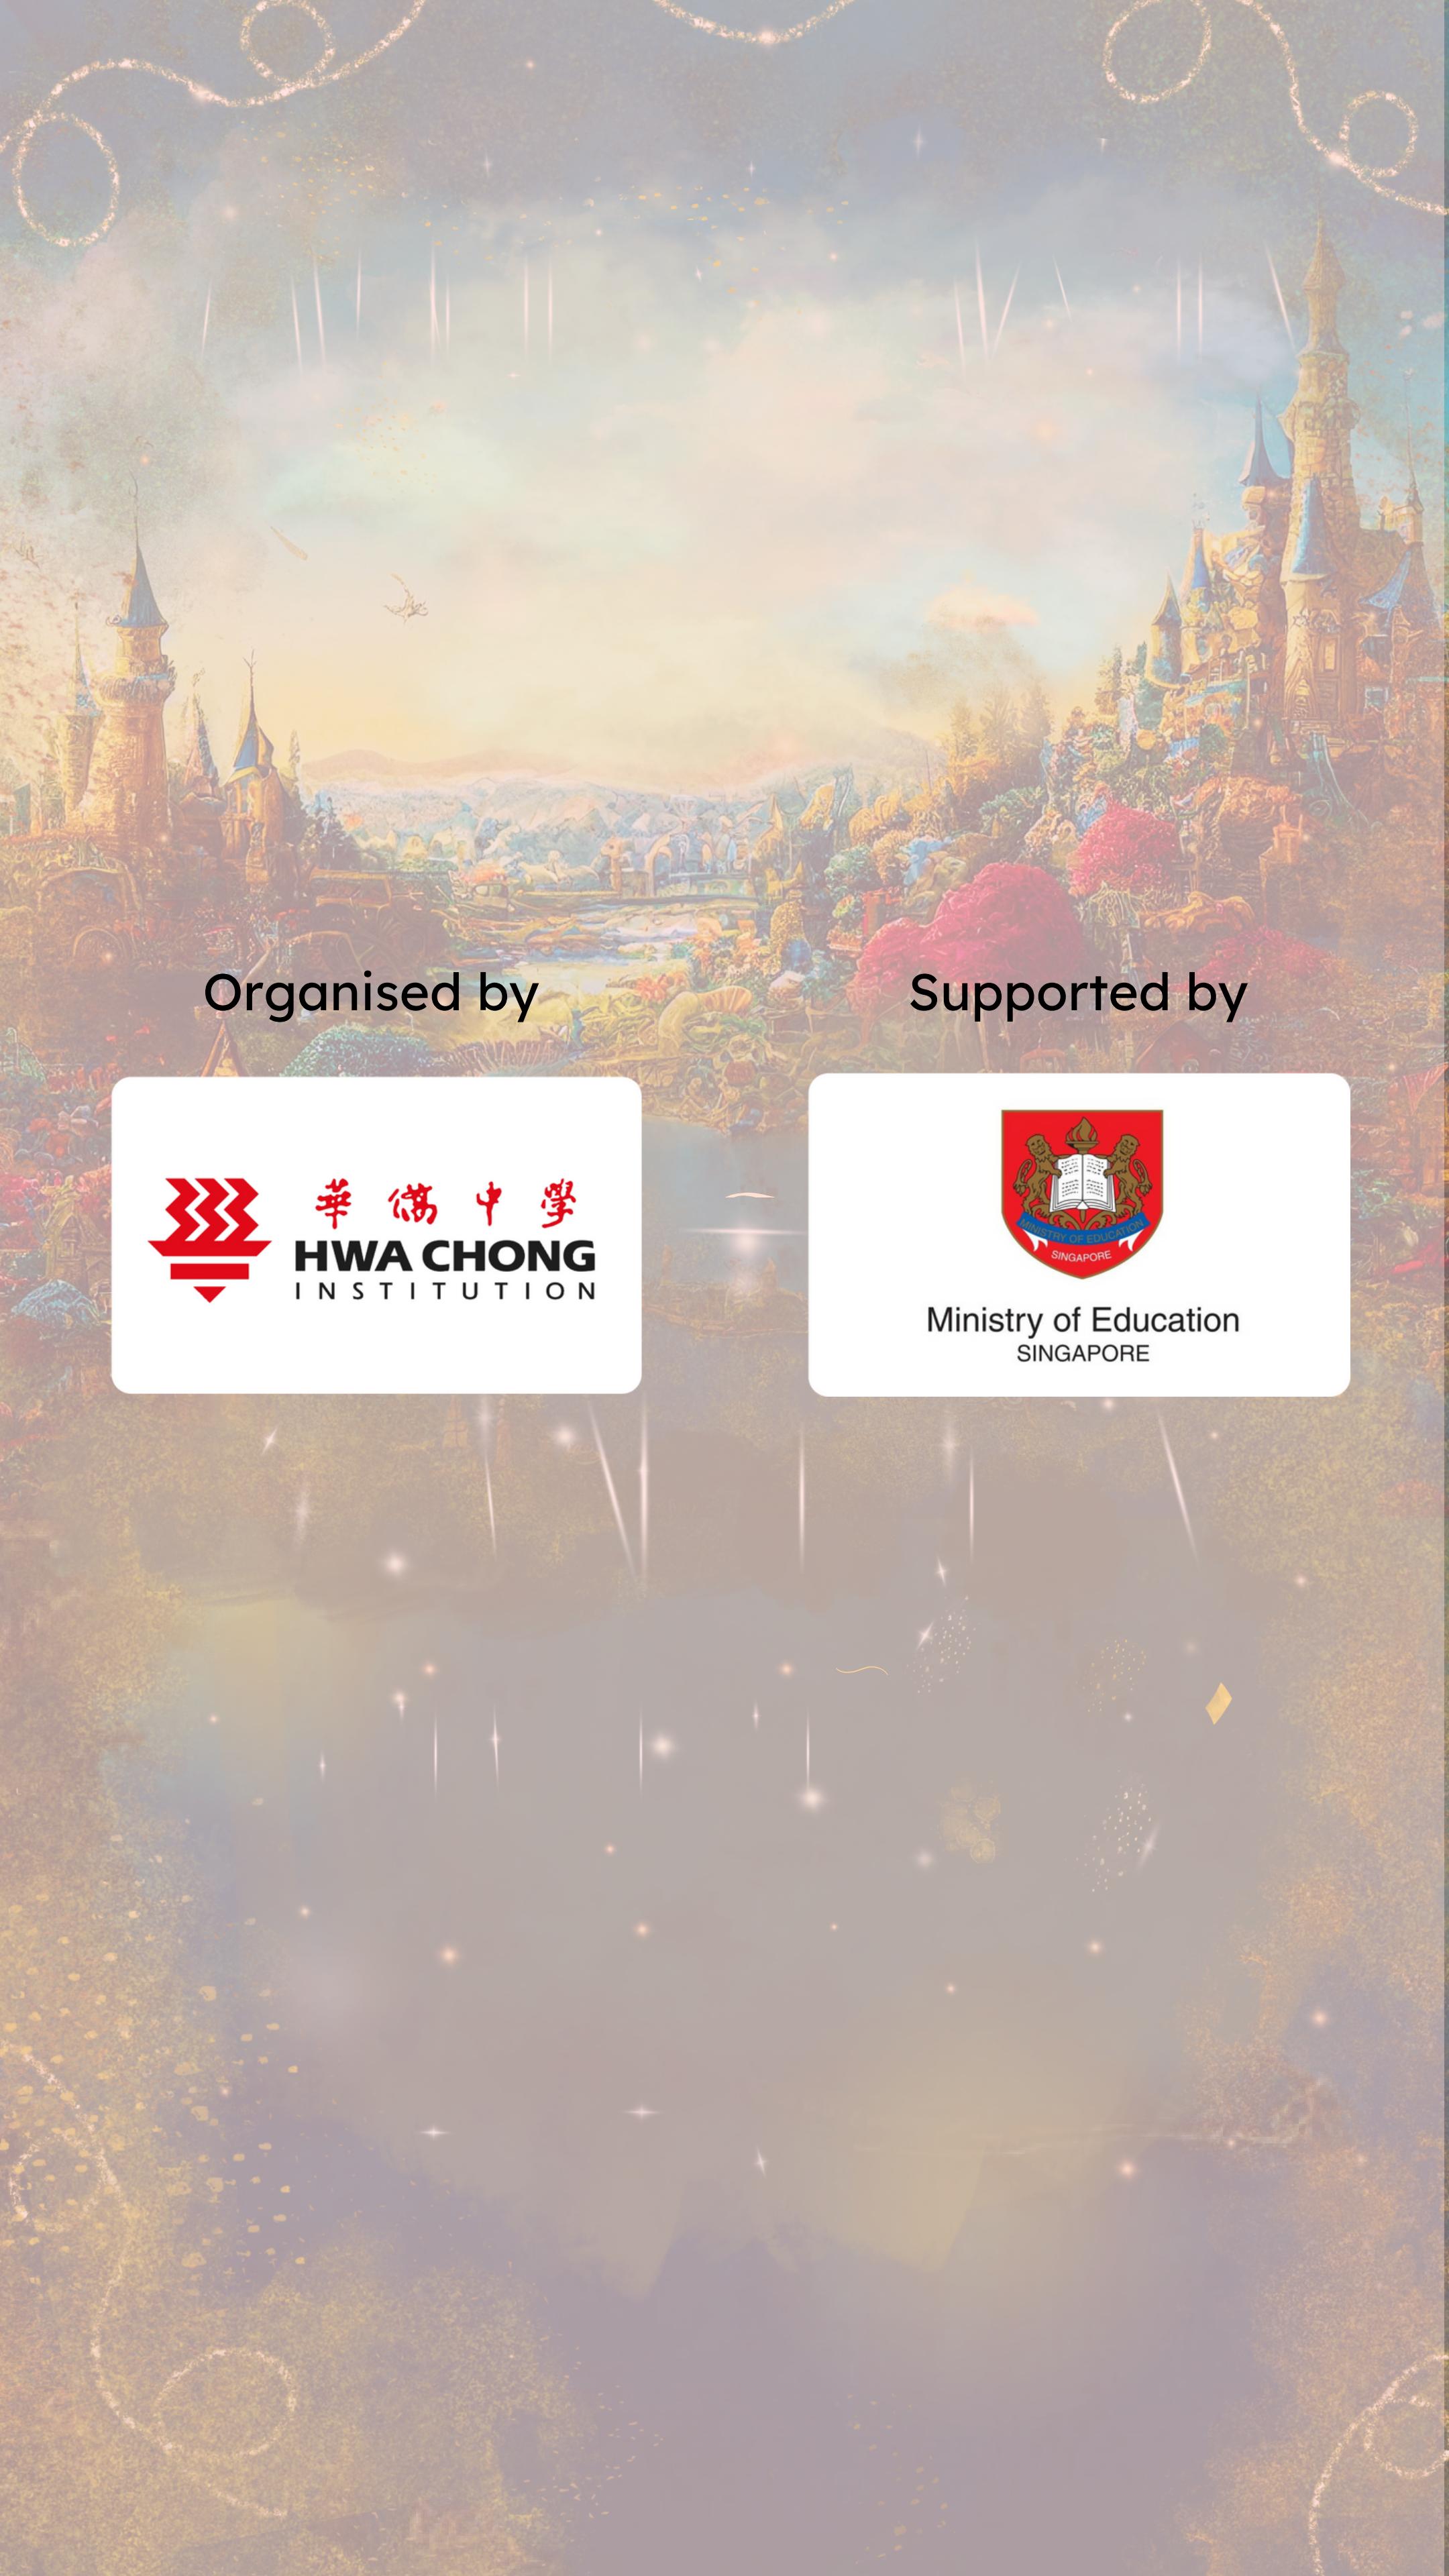

The key is to this problem is hidden within the elixir of all life. In a mysterious dance choreographed by unseen forces, a slumbering beast roars to life. It is now ready to be harnessed by those who have dared to unlock the secrets of this hidden alchemy.

(This riddle seems to be referring an exhibit you will be seeing on day 2)

4. Industrialem (Industrialisation)

In the heart of industrialisation and concrete jungles, a haven of avian coexistence unfolds. Observe the delicate balance between industry and nature and how it is meticulously nurtured through the lens of science and sustainability.

(This riddle seems to be referring to some kind of location...)
